

Software Engineer with 3+ years of experience building production web applications across SaaS and consulting environments. Specialized in React, TypeScript, and Vue 3, with full-stack experience designing GraphQL APIs, working with relational databases, and shipping scalable user-facing features. Comfortable owning features end-to-end and collaborating closely with product and design teams.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend: React, Next.js, Vue 3, Tailwind CSS, Material UI, Shadcn UI, Redux, Pinia
Backend / APIs: Node.js, Express, FastAPI, GraphQL (Apollo, Strawberry), REST APIs
Testing: Jest, React Testing Library, Playwright (E2E)
Databases: PostgreSQL, MySQL, MongoDB, Mongoose
Tools: Git, GitHub, Bitbucket, Jira, VSCode, Postman, Figma, Azure DevOps, Storybook
Practices: Responsive Design, Accessibility (WCAG/ARIA), Design Systems, State Management, CI/CD, Agile/Scrum, Code Reviews

Professional Experience

XQM ConsultingJune 2025 – Present

Freelance web development and e-commerce solutions

Founder & Software Engineer

- Build and deliver custom WordPress and Shopify sites for small businesses using both custom builds and templates, giving clients a modern, mobile-ready online presence.
- Work directly with business owners to translate brand and marketing goals into functional, responsive sites, handling design, development, and deployment end-to-end.

Tech Stack: WordPress, Shopify, JavaScript

Modern Tennis ProgramsMarch 2025 – April 2025

Freelance software engineering project for a youth tennis organization.

Freelance Software Engineer

- Redesigned the full site in Elementor with a mobile-first approach, modernizing outdated content and improving visual layout to better represent the organization.
- Integrated vCoachPro webhooks to automatically route new leads from the site intake form directly into the coaching app, eliminating 100% of manual lead assignment and giving coaches instant visibility into new signups.

Tech Stack: WordPress, Elementor

Provoke SolutionsFebruary 2024 – June 2024

Consulting firm delivering software solutions

Software Engineer II

- Rebuilt the login flow and core order forms in Next.js and Shadcn UI, replacing a legacy PHP system with a modern, accessible interface that gave clinicians a faster and cleaner way to order patient tests.
- Set up JSON Server for API mocking so frontend development could move independently of backend blockers, keeping feature delivery on track throughout the engagement.
- Built a shared Storybook component library of reusable form inputs and validation patterns used across both frontend engineers on the team, reducing duplicate UI work and standardizing behavior across pages.
- Grew test coverage from zero to 80% using Jest, React Testing Library, and Playwright, including accessibility-focused tests the client specifically required, contributing to a phase-two contract extension.

Tech Stack: Next.js, TypeScript, Tailwind, Shadcn UI, Storybook, Jest, React Testing Library, Playwright

Snap Mobile IncMay 2022 – January 2024

SaaS platform supporting school fundraising efforts

Software Engineer I

- Built Snap! Drive from the ground up using Vue 3 and Apollo GraphQL, delivering a centralized sales dashboard used by 400+ internal reps, account executives, and managers to manage campaigns, search fundraisers, and monitor events in real time.
- Led full-stack development of the Find Funds migration, designing GraphQL APIs, integrating PostgreSQL data sources, and delivering the Vue 3 frontend, reducing search load times by 60% and improving search accuracy across the company's fundraiser catalog.
- Integrated Twilio and SendGrid APIs to automate text and email outreach at campaign launch, replacing manual messaging workflows and enabling direct communication with coaches and contacts from the dashboard.
- Stepped in as interim lead developer for six weeks after the senior engineer departed, guiding a team of three engineers to deliver Campaign Search and additional dashboard features on schedule.
- Demoed Snap! Drive directly to internal reps and incorporated feedback from bug reports into ongoing improvements, keeping the tool aligned with how reps actually used it in the field.
- Built a full-stack fundraiser estimation tool end-to-end as the sole remaining engineer on the team, allowing reps to generate projected fundraising estimates and email them directly to potential leads. Delivered the feature across frontend, backend, and API layers in 2.5 months.

Tech Stack: Vue 3, React, TypeScript, Apollo GraphQL, Node.js, PostgreSQL, Twilio, SendGrid, Temporal

Projects

Portkey | Open Source Authentication Starter | FastAPI, Strawberry GraphQL, SQLAlchemy, JWT | [GitHub](#)

- Built a lightweight authentication and SSO starter for modern web applications using FastAPI and GraphQL.
- Implemented a full JWT authentication flow including register, login, protected user queries (me), logout, and refresh token support.
- Designed a modular backend architecture separating GraphQL resolvers, service logic, and SQLAlchemy ORM models to keep authentication logic isolated from API layers.
- Implemented secure password hashing using Argon2 and token-based session management using access and refresh tokens.

Certifications

Graph Developer - Professional, Apollo GraphQL, 2025
Graph Developer - Associate, Apollo GraphQL, 2024
Full-Stack Developer Certificate, Coding Dojo, 2021

Education

Bachelor of Arts in Digital Media – Game Design, University of Central Florida, Orlando, FL, 2016–2019
